

ACTIVITY REPORT

Name of the Activity	A Webinar on Research Methodology		
Type of Activity	Curricular		
Date and Time of Activity	06-02-2021	10:00am to 04:00pm	
Details of Participants	Students of CSE&IT		
Coordinator(s)	Faculty: T.V Ramanama, Associate Professor, CSE		
Organizing Dept.	Computer Science Engineering & Information Technology.		
Details of Resource Persons	Dr.Sathish,		
Description <i>(min. 100 words, include objective, outcome, etc.)</i>	<p>The session was organised with an intention of giving students the right direction in their respective research. The session began with the interactive activity with the participants to know their ideas on “What is research?”. Taking a glance of students’ perspectives on these very important pointers, the Speaker addressed the different issues that students usually face right from the identification of interest areas till the generation of outcome in the end. Through his personal experiences, the speaker made a point that it is the exposure in the research area that brings maturity and creativity in the project. Another important highlight of the session was to make students understand about designing the depth of thesis for personal growth, progress and not merely for academic excellence. The journey shared by the speaker proved quite motivational and inspirational for all the students as it stressed essentially the process and research based approach towards design in the thesis.</p>
